I. MAJOR CONCEPTS/CONTENT: The purpose of this cluster is to prepare students for employment or advanced training in the environmental industry. The cluster focuses on broad, transferable skills and stresses understanding and demonstration of the following elements of the environmental industry; planning, management, finance, technical and production skills, underlying principles of technology, labor issues, community issues and health, safety and environmental issues.

Completers of these programs will be prepared to enter advanced training and education in specialized fields of environmental science or environmental business. They may also be employed as trainees or beginning workers in various environmental science or environmental technology related positions in certain businesses and industries.

The content includes, but is not limited to, knowledge of federal, state, and local regulations; ecosystem awareness; problem recognition; water quality issues; solid and liquid waste management issues; air quality issues; managing hazardous materials; managing forests, wetlands, fisheries, and wildlife; planning and administering land use; protecting resources; conducting site assessments; sampling procedures; safety procedures; compliance monitoring and quality assurance procedures; and instruction in environmental technology.

Reinforcement of basic skills in English, mathematics, and science appropriate for the job preparatory programs is provided through career and technical classroom instruction and applied laboratory procedures or practice. This program focuses on broad, transferable skills and stresses understanding and demonstration of the following elements of the public service industry; planning, management, finance, technical and production skills, underlying principles of technology, labor issues, community issues and health, safety and environmental issues.

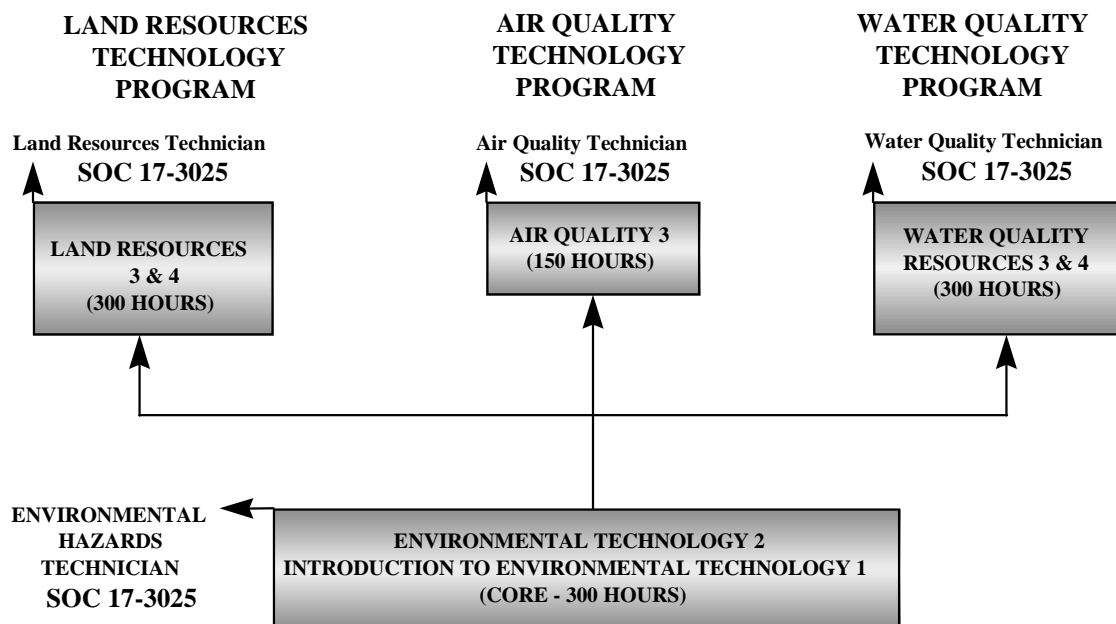

II. CLUSTER STRUCTURE: This cluster is a planned sequence of instruction consisting of a core, three programs, and four occupational completion points. When the recommended sequence is followed, the structure will allow students to complete specified

portions of the program for employment or remain for advanced training. A student who completes the applicable competencies at any occupational completion point may either continue with the training program or become an occupational completer.

Students must complete the core, or demonstrate the mastery of skills standards contained in the core, before advancing in any of the programs: Land Resources Technology, Air Quality Technology, or Water Resources Technology.

The following diagram illustrates the **CLUSTER STRUCTURE**:

ENVIRONMENTAL STUDIES CLUSTER

When offered at the secondary level, the programs in this cluster consist of the following courses that include the core:

III. LABORATORY ACTIVITIES: Environmental technology activities (shops, wet labs, land labs, and greenhouses) are an integral part of these programs, which include the safe use and application of high technology equipment, such as computers and computer software, telecommunications equipment, and scientific testing and observation equipment, as well as mechanics' tools, field tools, drafting tools, various hand tools, power sprayers, chemical applicators, various types of meters and pumps, maps, gauges, and fire-control hand equipment.

IV. SPECIAL NOTES: The Florida Public Service Association, Inc. (FPSA) is the appropriate Career Student Organization (CSO) for providing leadership training and reinforcing specific career and technical skills. CSOs, when provided, shall be an integral part of the career and technical instructional program, and the activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, Florida Administrative Code.

Planned and supervised occupational activities must be provided through one or more of the following: (1) directed laboratory experience, (2) student project, (3) placement for experience, and (4) cooperative education.

Cooperative training - OJT is appropriate for this program. Whenever cooperative training - OJT is offered, the following are required for each student: a training plan, signed by the student, teacher, and employer, which includes instructional objectives and a list of on-the-job and in-school learning experiences; a workstation that reflects equipment, skills, and tasks that are relevant to the occupation which the student has chosen as a career goal. The student must receive compensation for work performed.

When a secondary student with a disability is enrolled in a career and technical class with modifications to the curriculum framework, the particular outcomes and student performance standards that the student must master to earn credit must be specified on an individual basis. The job or jobs for which the student is being trained should be reflected in the student's desired postschool outcome statement on the Transitional Individual Educational Plan (Transition IEP).

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Adult students with disabilities must self-identify and request such services. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments,

time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

SCANS Competencies: To accomplish the Secretary's Commission on Achieving Necessary Skills (SCANS) competencies, instructional strategies for these programs must include methods that require students to identify, organize, and use resources appropriately; to work with each other cooperatively and productively; to acquire and use information; to understand social, organizational, and technological systems; and to work with a variety of tools and equipment. Instructional strategies must also incorporate methods to improve students' personal qualities and higher-order thinking skills.

Equipment List: A generic equipment list is available for the programs in this cluster.
